Daniel Keinan

New York, NY • dk3425@columbia.edu • (917) 588-9429 • linkedin.com/in/daniel-keinan • github.com/dkdan10

Columbia CS student with ~2 years of professional full-stack engineering experience.

EDUCATION

B.A. Computer Science | **Columbia University**, New York, NY *Expected May 2027*

- Coursework: Analysis of Algorithms, Data Structures, Artificial Intelligence, Natural Language Processing, Advanced Software Development, Software Quality & Design, Fundamentals of Computer Systems, Linear Algebra & Probability, Discrete Math

Software Engineering Bootcamp | **App Academy**, New York, NY *2019*

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, C, SQL, Ruby, Swift
Frameworks: React, FastAPI, Node.js/Express, Ruby on Rails, Django
Tools & Infra: Git, GitHub Actions (CI/CD), Docker, pytest/Hypothesis, Playwright, Vite, PostgreSQL, SQLite, MongoDB, Linux
ML / AI: LLM APIs (Anthropic, Ollama), LLM-agent evaluation, NumPy, pandas

EXPERIENCE

Applications Engineer | **Medidata Solutions**, New York, NY *Dec. 2019 – Jun. 2021*

- Built patient-facing React components and Ruby on Rails endpoints for the "Ship Direct to Patient" feature, enabling remote medication delivery for clinical-trial participants during COVID-19 lockdowns.
- Shipped features into a large production Rails/React codebase supporting active clinical trials nationwide, on a 10-person Agile team with a two-approval pull-request process and dedicated QA.

Engineering Intern | **Kawada Robotics**, Tokyo, Japan *Feb. 2019 – May 2019*

- Programmed Kawada's NEXTAGE humanoid robot in C# using internal robotics software.

Software Engineering Intern | **AGMednet**, Boston, MA *Jun. 2018 – May 2019*

- Built a prototype configuration tool for AGMednet's medical imaging software using Angular and MongoDB.

PROJECTS

AiLibi — Among Us-style social deduction played by LLM agents (live) | Python, FastAPI, React, PixiJS *2026*

- Designed a deterministic game engine where every match is recorded and replays byte for byte. Players follow rules during rounds; at meetings each is fed its own memory of what it saw, and LLMs handle the accusations, discussion, and voting.
- Put an observation firewall between the agents and the game: players never see the full state, and the boundary is enforced in CI with import-linter rules and leak tests.
- Moved the LLM backend across providers as budget and scale changed (Anthropic, then local Ollama, then Featherless for 50-game tournaments), all behind one cost-budgeted client.
- Built using a modern contract-driven workflow, with AI agents implementing written contracts with acceptance criteria — 110 in all — each shipped as its own PR and passed through AI review before I accepted it.

FADEAWAY — Art piece built on 30 seasons of public NBA shot data (live) | Python, pandas, NumPy, TypeScript, Canvas *2026*

- Layers every shot from 1996 to 2026 onto one halfcourt to show how shot selection (midrange, threes, at the rim) and the way shots were recorded changed across eras; rendered in the browser with TypeScript and Canvas.
- Built the Python pipeline that turns 5.9M shot attempts and 632 games of player tracking into compact binary files.
- Added an acceptance gate that re-checks every number on screen against its source before anything ships.
- Wrote a companion paper, CONTESTED, on how NBA data is defined, gathered, and owned.

ADDITIONAL EXPERIENCE

House Manager | **Transcend Recovery Community**, New York, NY *May 2022 – Aug. 2024*

- Led daily operations for a structured residential community: crisis response, resident accountability, and cross-team communication in high-stakes situations.

Scout Player | **Columbia Women's Basketball**, New York, NY *Aug. 2024 – Present*

- Practice player simulating upcoming opponents for the varsity team; assist coaching staff with drills and player development.

Interests: Basketball (former D-III player), Chess, Music | **Volunteering:** Covenant House, Reading Partners
